

Senior AI-First Mobile Architect

Samira Salah

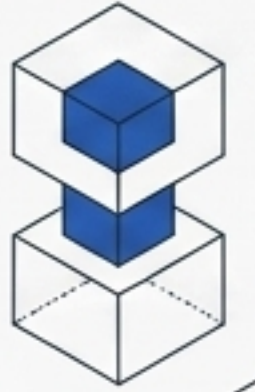

Specializing in **AI-Driven** Engineering, Scalable Architectures & Cross-Platform Solutions.

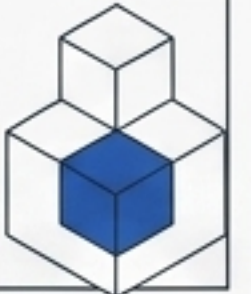

Bridging the gap between complex business requirements and production-ready mobile solutions through intelligent automation, Clean Architecture, and senior-level technical leadership.

 Based in Bergneustadt, Germany | Available for remote global partnerships.

The AI Advantage

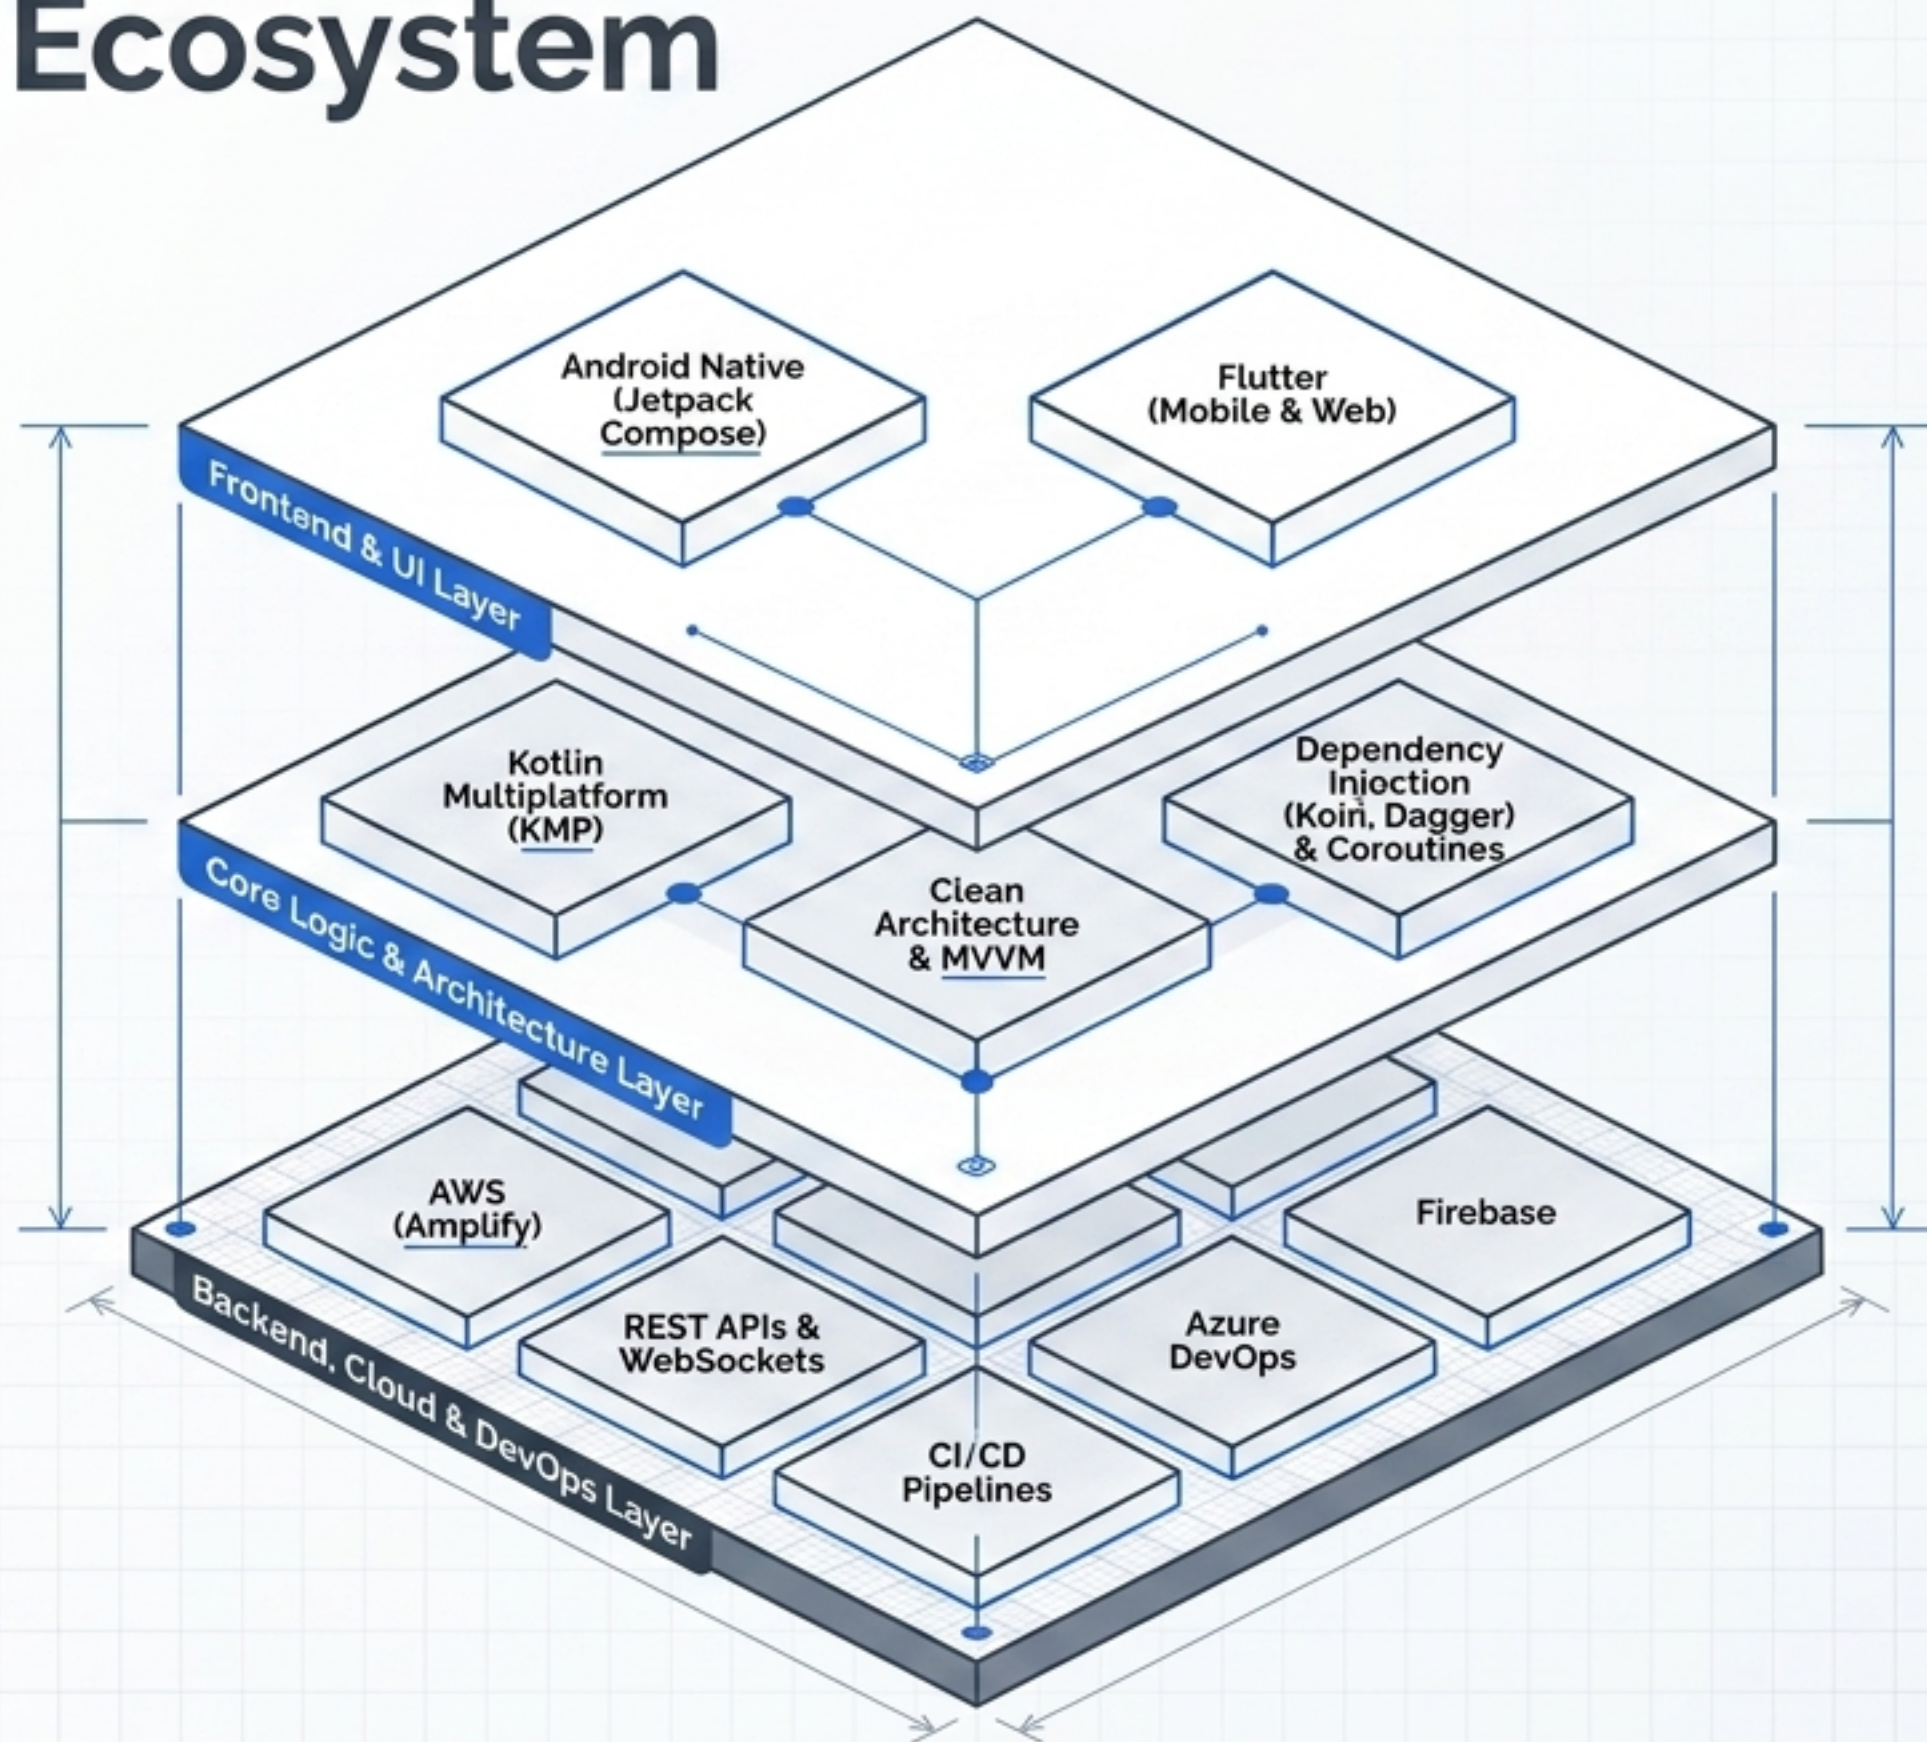

The Traditional Cycle

The AI-Augmented Cycle

Technical Ecosystem

Engineering at Enterprise Scale

Schneider Electric

Android Technical Lead

Global Enterprise App (mySchneider)

Architectural Impact

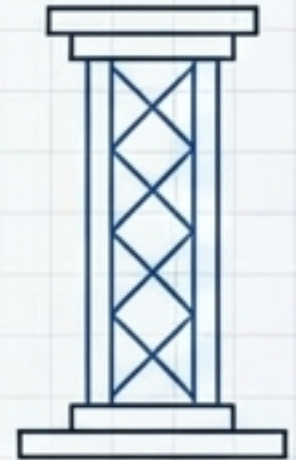

Managed CI/CD automation via Azure Pipelines

Integrated AI-assisted troubleshooting

Supervised strict Play Store release management cycles

Proxym Middle East

Senior Android & Flutter Architect

Public Sector & Enterprise Scale

Architectural Impact

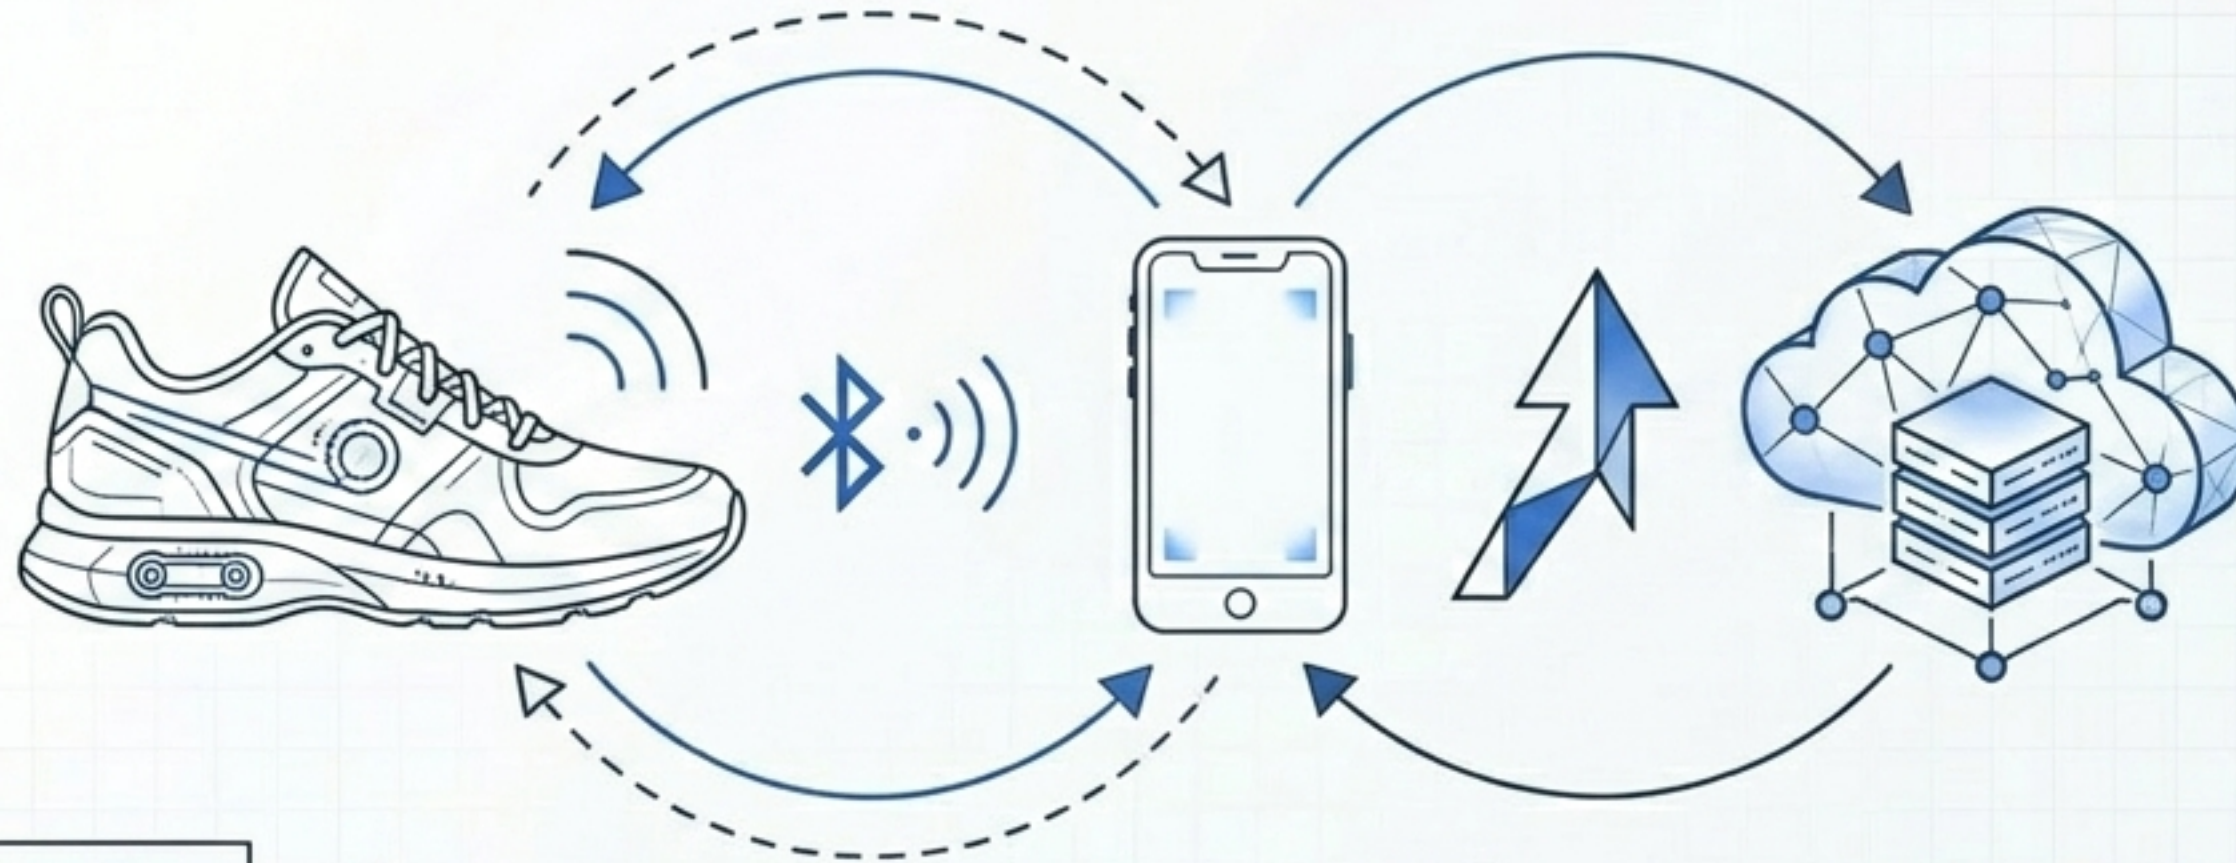

Led transition to Kotlin Multiplatform (KMP) sharing 60% of business logic

Integrated complex UAE Pass authentication (App-to-App/Web)

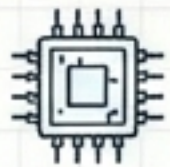

Deployed custom Python AI QA agents

IoT & Connected Health

Digitsole

Architectural Solutions

Engineered **real-time BLE** communication and Audio Coaching integration.

Built complex visual **data** mapping using **MPAndroidChart**.

Led critical infrastructure **migration** of backend services from **Firebase** to **AWS** (Amplify).

Implemented secure **OAuth 2.0** authentication.

Security, Web3 & Enterprise Identity

Dubai Chamber

High-stakes business services platform deployed via AppGallery, utilizing Kotlin and strict REST API architecture.

Maskan

Real estate application requiring high-level security integration of the UAE Pass for complex App-to-App and App-to-Web authentication flows.

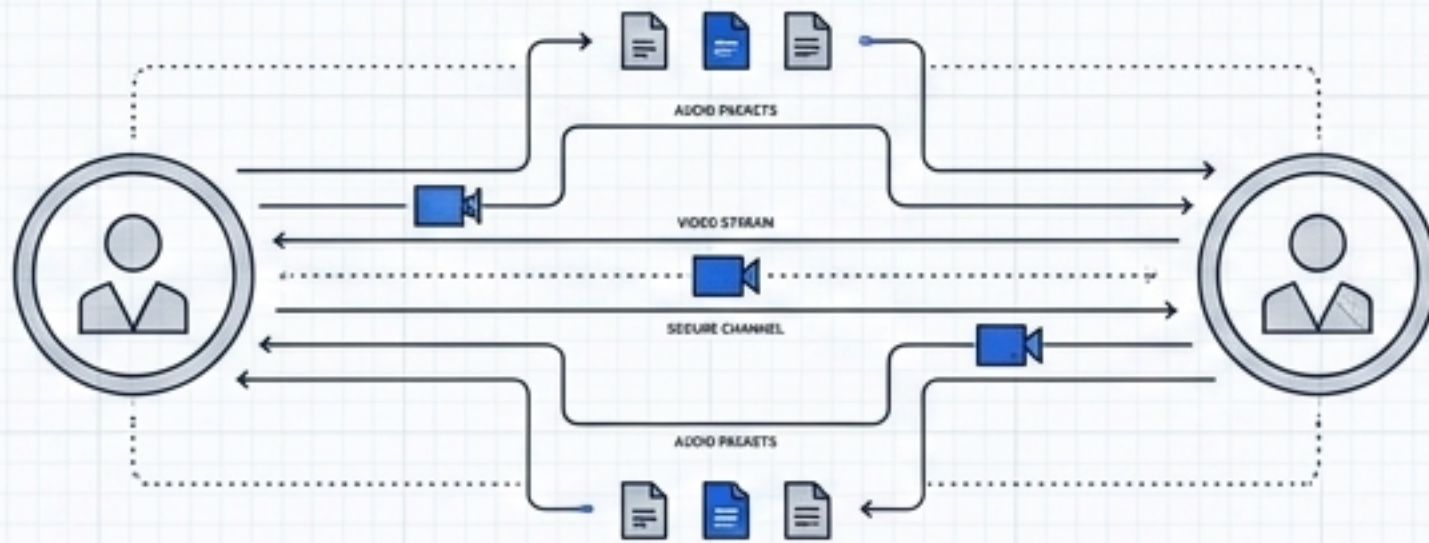

BTU-Direct

Web3 crypto wallet application engineered using the WEB3J library. Allows users to check Ethereum balances, securely exchange tokens, and update token values against live market web services.

Real-Time Communication & Geospatial Routing

Translatly (Germany)

Real-time translation and conferencing platform. Architected secure audio/video VoIP communication using Twilio, integrating reliable push notifications and Sqlite local storage.

Runnrz

Complex geospatial fitness tracker. Executed complete architectural migration from MVC to MVVM. Integrated MapBox for live geospatial tracing, dynamic speaker announcements triggered by user position, and Google Fit integration for biometric step calculation.

Velocity

30% faster delivery cycles via Python-based QA agents and LLM-assisted refactoring.

The AI-First Blueprint

Scalability

Sharing up to 60% of core business logic through Kotlin Multiplatform (KMP) and Clean Architecture.

A unified architectural approach that guarantees stability across any domain.

Adaptability

Proven execution across high-friction environments: IoT Hardware (Digitsole), Web3/Crypto (BTU-Direct), and Real-Time VoIP (Translatly).

Let's architect your next mobile solution.
